SMART CONTACT MANAGER

TEAM LEADER:THIRISHA.S

TEAM MEMBER:THIRISHA.E

TEAM MEMBER:VANAKI.S

INTRODUCTION:

- A Contact Manager is an application used to store and manage contact details like name, phone number, email, and address. It helps users organize their contacts in a digital format.

OBJECTIVE OF THE PROJECT:

- The main objective is to create a system where users can add, update, delete, and search contacts easily using a database.

PROBLEM STATEMENT:

- Managing contacts in notebooks or scattered files is difficult. This project solves the problem by providing a centralized digital contact storage system.

TECHNOLOGICAL TOOLS:

This project uses:

- MongoDB –Database
- Node.js – Backend
- Express.js – Server
- frameworkHTML/CSS/JavaScript – Frontend

SYSTEM ARCHITECTURE:

- The system follows a client-server architecture.
- User → Frontend → Node.js Server → MongoDB Database.

DATABASE DESIGN:

- MongoDB stores data in collections and documents.
- Example collection: contacts
- Example document:
- **Copy code:**

- {
- "name": “THIRISHA.S",
- "phone": "9876543210",
- "email": “V64359412@gmail.com",
- "address": "Tamil Nadu"
- }

FEATURE OF CONTACT MANAGER:

- Add new contact
- View contact list
- Update contact details
- Delete contact
- Search contacts

ADD CONTACT MODULE:

- This module allows users to enter contact details and save them in the MongoDB database.

VIEW CONTACT MODULE:

- Users can see all saved contacts in a list format from the database.

UPDATE CONTACT MODULE:

- Users can edit existing contact information like phone number or email.

DELETE CONTACT MODULE:

If a contact is no longer needed, the user can remove it from the database.

SEARCH CONTACT MODULE:

- Users can search contacts by name or phone number quickly.

ADVANTAGES OF MONGODB:

- NoSQL database
- Flexible schema
- Fast data retrieval
- Stores data in JSON-like format

FUTURE ENHANCEMENTS:

- Add login and authentication
- Add profile pictures
- Cloud database storage
- Mobile application version

OUTPUT SCREENSHOTS:

CONCLUSION:

- The Contact Manager project helps users store and manage contacts efficiently using MongoDB. It is simple, fast, and useful for personal or business use.
